

# Premium Energy Group

*Exceptional Performance  
Proven Results*

*In our business, customers need to be able to count on reliable service, quality products, reasonable prices and commitment to safety. That's the foundation of everything we do at Premium Energy Group.*

## The Premium Advantage

**Value.** It's what everyone wants. That unique combination of high quality products and exceptional service, delivered at a reasonable price. Add in executive-level commitment to safety, and it's what Premium Energy Group provides to its customers nationwide each and every day.

**Service.** We don't just talk it. We live it. From order to invoice, we take the time to do everything with excellence. We put ourselves in the minds of our customers. We hire the best. And we make ourselves available. So you get everything you need, every single time.

**Focus.** Your operation is your priority. Pressure control is ours. Our team is well trained in what we do and have an established track record of doing it right.

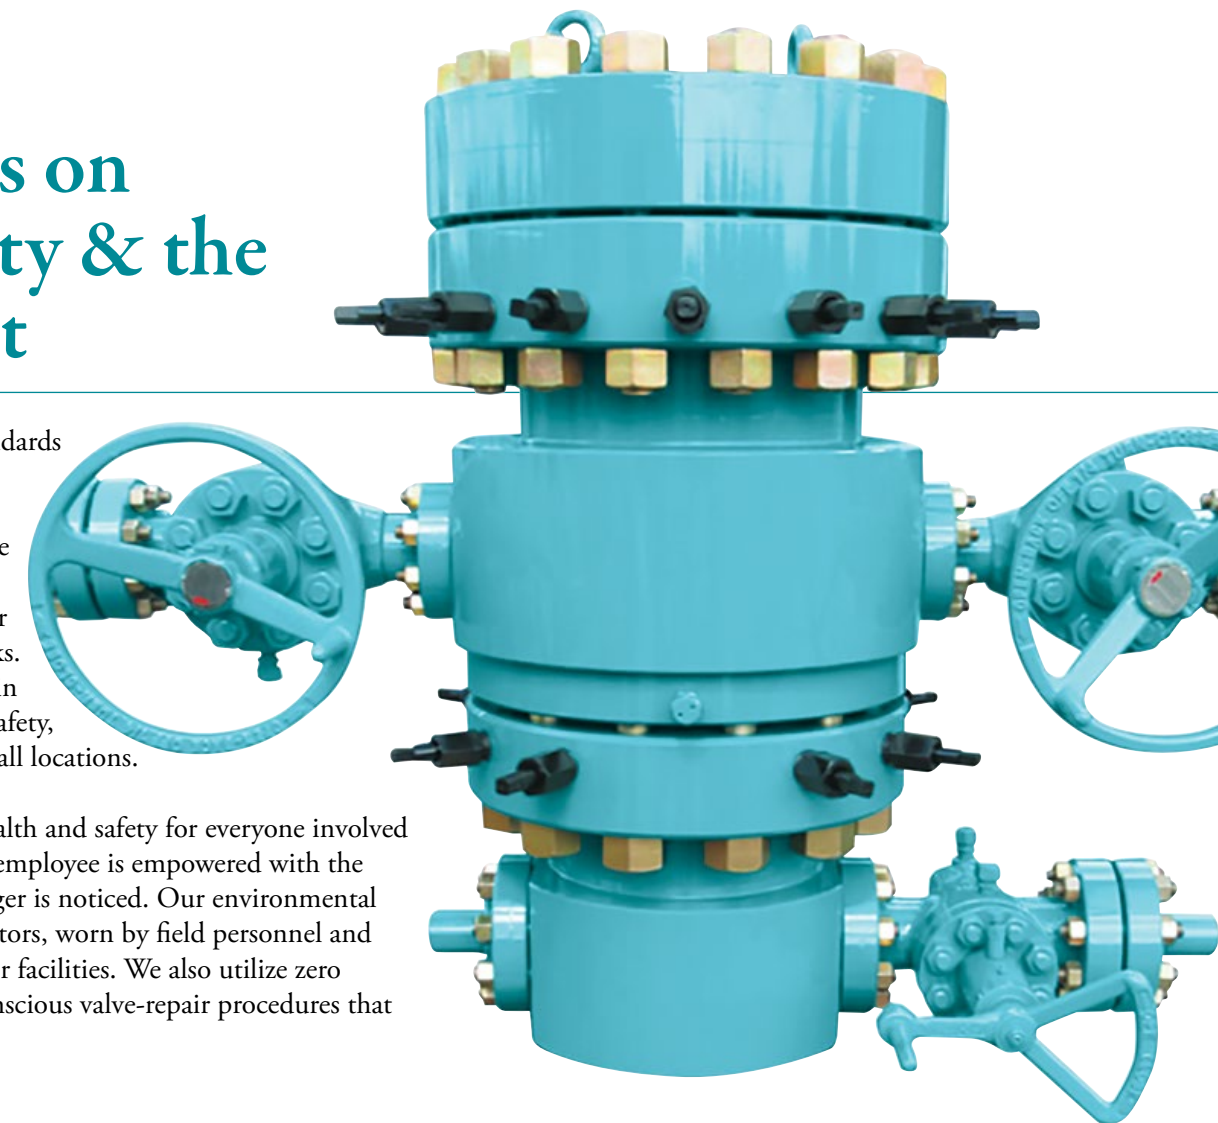

## Our Commitment to Quality

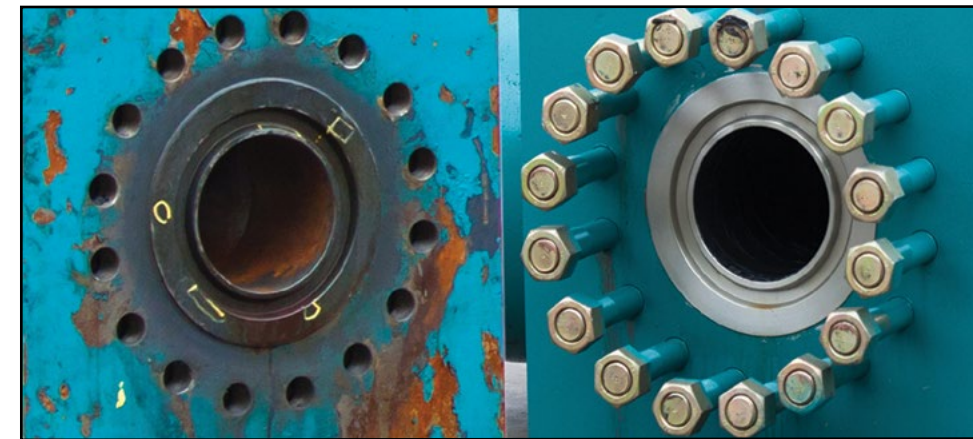

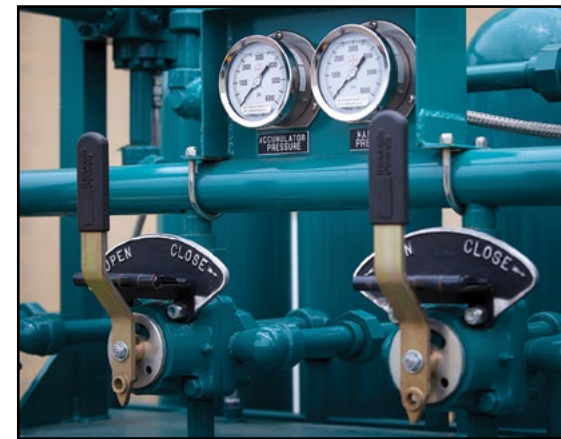

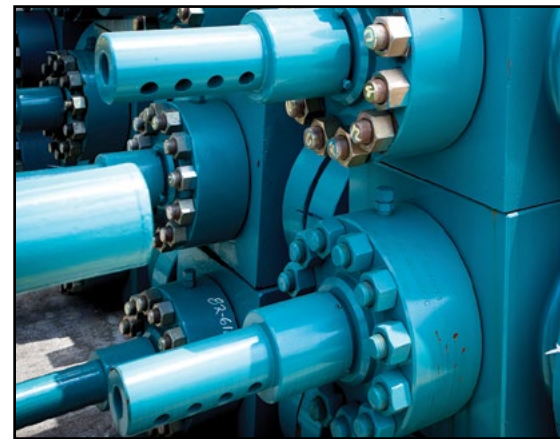

From the materials we use to our three-stage quality control and testing process, you can rely on Premium Energy Group's new and aftermarket products to meet or exceed industry standards. We perform thorough checks and balances at every point from the manufacturing facility, to our U.S. distribution center, to our field service centers. Our inspectors at each of these locations perform dimensional inspections, NDE inspections, and audits for compliance with our quality system processes and procedures.

## An Emphasis on Health, Safety & the Environment

At Premium Energy Group, our standards for protecting health, safety and the environment are a critical focus. Under the guidance of our Corporate Director of HSE, our regional safety managers proactively perform regular safety training and compliance checks. Premium Energy Group executives, in keeping with their commitment to safety, also perform periodic inspections at all locations.

We train to industry standards of health and safety for everyone involved in our projects, and every Premium employee is empowered with the authority to "Stop Work" when danger is noticed. Our environmental protection efforts include H2S detectors, worn by field personnel and used in our manufacturing and repair facilities. We also utilize zero VOC paint and environmentally conscious valve-repair procedures that reduce ozone emissions.

## Exceptional Service Sets Us Apart

A commitment to both customer satisfaction and ongoing technical training is what sets Premium apart. We provide customer service coordinators as a single point of contact for each of our clients to ensure a full understanding of needs before any technicians are sent to the field. We make sure that everyone going into the field is equipped with the right tools, and is assessed and deemed competent to do each job.

At Premium Energy Group, there is no such thing as “ad hoc” ungoverned service – each technician has a pre-established process and procedure for everything they are going to do. We provide classroom and hands-on training and assessments for all of our service personnel, and have regional training managers who continually re-assess employees and look for areas of improvement

## Asset Management and Repair Services

Asset management is more than just storage. Our priority is the evaluation and efficient utilization of client assets throughout the asset life cycle.

Premium Energy Group maintains rigorous quality standards for all of its rental products, as well as for customer equipment needing repair. Our frac valves are clad with 625 Inconel, enhancing their service performance and extending the life and durability of the assets. Once a product is repaired or remanufactured, it goes through a full multi-stage dimensional inspection and API-6A testing process to ensure that nothing is sent out into the field until it is fit for function, in like-new condition.

Our repair services include:

- Immediate “triage” to determine the scope of repairs required
- Disassembling and inspecting all areas for damage
- Equipment receipt/cleaning/material/processing/disassembly/testing/grease/paint
- API 6A Machine shop service

## Field Services

Meeting and exceeding customer expectations is the top priority at Premium Energy Group. All of our services are tailored to the needs of each customer, and are performed by highly trained and certified personnel. These services include:

- Equipment installation
- Well completion and de-completion
- Flange torque services
- Preventative maintenance and lubrication
- Field survey & well identification
- High volume hydrostatic testing
- Live well services
- Technical support and training of customer personnel
- Equipment repairs

## Premium Products

Premium Energy Group has both manufacturing and engineering facilities near its headquarters in Houston to ensure consistent levels of communication, oversight and cost controls. The company is committed to delivering the highest quality pressure control equipment available, and all products are manufactured in strict accordance with API mandated specifications and tolerances. Our products include:

- Conventional wellhead
- Time-saving multi-bowl systems
- Surface production equipment
- Multiple well frac manifolds
- Frac stands
- Accumulators
- Maintenance and greasing units
- Test units
- Frac rental equipment

*Repeat business is the hallmark of a company that is “doing it right.” From the integrity of our products to our talented, trained and well-prepared staff, we are our clients’ final line of defense in well control. Our customers sleep well knowing we are delivering proven results every day.*
